## DETAILED ACTION

### *Election/Restrictions*

Claims 37-68 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 30, 2009.

However, this application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- A. The embodiment shown in figure 2
- B. The embodiment shown in figure 3
- C. The embodiment shown in figure 4
- D. The embodiment shown in figure 5

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: Claim 1.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Claim 1, which is the independent claim to which all of claims 2-36 depend from, either directly or indirectly, does not include a special technical feature in view of WO 02/057707 A1. This publication discloses each and every limitation of Claim 1, and thus it should be appreciated that Claim 1 does not include a special technical feature. Thus, the special technical feature(s), if one (or more) is indeed included in the claims, appears to be a combination of the arrangement of (1) strata (layers) blasted, (2) blast hole depth, (3) explosive loading, and (4) overall blast geometry. These features are all illustrated and described as different among the species listed above, and thus it is the opinion of the examiner that said species lack unity.
